ICS: 17.200.10 National Ref: E0206C594

Title: Energy performance of buildings - Part 4: Renewable energy and other generation

systems for space heating and domestic hot water production

**Scope:** The technical specification calculates the energy demand for space heating and domestic hot

water production if there are subsystems that provide useful thermal energy generation from renewable energy or generation methods other than the flame combustion of fossil

fuels treated in UNI / TS 11300-2.

The following subsystems for production of heat and / or electricity are considered:

- Solar thermal systems;

- Combustion biomass generators;

- Heat pumps;

- Photovoltaic systems;

- Cogenerators.

They are also considered the district heating substations.

#### **Subsector B33: BUILDING DESIGN**

Subsector: B33 Registration Date: 2015-05-15

Organization : SN
Country : Norway

Project ID: NOT15003/0001 Published

ICS: 91.120.20 National Ref: 91.120.20

Title: Acoustic criteria for rooms and spaces for music rehearsal and performance

**Scope:** This standard specifies differentiated criteria for acoustic conditions and characteristics for

spaces used for music rehearsal and performance. The criteria are specified for different types of music, regardless of the type of building in which the spaces are located. The standard provides criteria for room acoustics in spaces used for music rehearsal and

Standard

performance, whether this is the primary use of the spaces or they are multi-purpose spaces. Together with the acoustic criteria, requirements are also given for room height, net room volume and net area. Criteria for acoustic conditions are differentiated on the basis of three music types: amplified music, quiet music and loud music. Definitions of these are given in clause 3. The standard is intended to be used in the planning of new buildings and the refurbishment of existing ones. The standard can also be used to assess the suitability of existing spaces for different musical purposes. The standard can be used for the adjustment of rooms and spaces whose primary purpose is not music rehearsal and performance. This

can be done by using flexible solutions or by choosing a range of use which can be combined, for example in gymnasiums, classrooms, assembly halls, multi-purpose halls, etc. The criteria in this standard are not intended to be applied to large specialized concert halls, opera venues and similar spaces which are basically designed for concerts and performances. For music rooms, the limit values for background noise and sound insulation are given in clause 7 in NS 8175:2012. For other types of rooms and spaces whose primary purpose is not music rehearsal and performance, limit values for the background noise from technical installations are stated for the actual room types in class C in NS 8175:2012. The standard does not deal with the need for logistics, storage rooms for instruments and other key support functions relating to music rehearsal and performance

Subsector: S09 Registration Date: 2015-05-07

Organization: NEN

Country: Netherlands

Project ID: 50001932/0001 Project Established

ICS: 13.060.50

National Ref: NEN 7393:2015 Concept nl

Title: Water quality - Determination of adenosine tri phosphate (ATP)

Scope: NEN 7393 describes a method for the quantification of the total ATP content in water. The

standard applies to the microbiological analysis of water, unless the nature of the test sample disturbs the analysis. Adenosine tri-phosphate is an energy-rich compound which is present in all living cells and is therefore a measure of the active biomass. Upon the dying of living cells, ATP can also occur in water outside the cell (extracellular ATP). The total ATP content (intracellular and extracellular ATP) is measured in a solution, after the rupture of the cell walls, by means of chemo-luminescence which is released after the reaction with a

luciferin/luciferase solution.

Title: Water - General principles for quality assurance of moleculair-biological examination of

water

Scope: This code of practice describes a number of general principles that can be applied in the

preparation and improvement of quality systems in laboratories for molecular-biological examination of water, in addition to general principles for quality assurance in laboratories (NPR 6268). This guidance document is intended for use by laboratories and certification

bodies, and aims both to provide information and to promote standardization.
